JOBS WISHLIST- UI and Prototype Report

-Vinay Kumar Dahiya

Introduction

The user will be able to create to create a Wishlist of profile-company combinations to watch. As soon as the company provides opening for any item in the Wishlist, the user will be notified via mail or text or both.

This frees the user of constantly opening the careers page and checking or risk missing the opportunity.

User Interface

The UI will be kept minimal as of now and will be improved with further iterations. As of now, user can login/signup, create and update his Wishlist by selecting from a provided list, watch the open and expired items in his Wishlist, update and reset the password.

Navigation Structure

1. *Home page*: allows the user to login/ signup.
2. *Signup* button takes the user to a registration page where he/she is required to enter the basic information.
    a. This is followed by the page to make the Wishlist by selecting from a list of pre-provide roles and companies, which can be updated later as well (checkbox behaviour isn't working in the prototype). Finishing this takes the user his/her *Dashboard*.
3. *Sign in* button makes text field for username and password to appear. Entering the details and logging in takes the user to his/her *Dashboard*.
    a. *Forgot password* an alert box at the bottom of the page informing the user about the password reset link being sent to his email id.
4. *Dashboard* allows the user to view open and expired Wishlist items. Option to update, change password and logout is also provided.

a. *Update* takes the user to the page where he/she can add/remove the previous selections.
b. *Change password* takes the user to a page where he/she can enter old and new passwords to change it.
    i. *Update* button displays an alert message on the bottom of the page informing the status of password change and takes the user back to the dashboard.
c. *Logout* button logs the user out and takes him/her to the homepage

A simple prototype to understand the basic flow of the application:
